

YELLOW SAND STONE

BEIGE MARBLE TILES

Number: D*2835N

Granite Energy

The most common cementing materials of sandstone-orange are silica and calcium carbonate, which are often derived either from dissolution or from alteration of the sand after it was buried. Colour will usually be tan or yellow. Sandstone-orange has been used for domestic construction and housewares since prehistoric time. Now, it has been widely used around the world in constructing temples, homes, and other buildings.
