onice aragosta

La tipologia di questo prodotto fa parte della famiglia degli Onici, la variante interpretata è conosciuta col nome di "Aragosta" proprio perché è caratterizzato da ampie venature di colore marrone arancio stese su un fondo azzurro ceruleo.

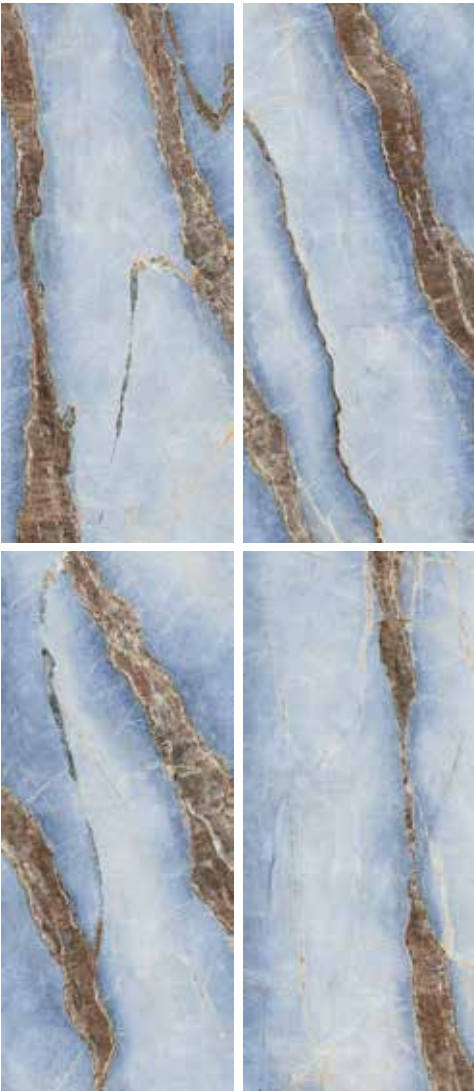

This product is part of the Onice (onyx) family, and the variation interpreted is known as "Aragosta" (lobster) precisely because it has wide brown-orange veins extending across a cerulean blue background.

onyx white absolute

L'onice calcarea ha origini ben lontane nella storia: è il 'marmor alabastrum' dei Latini ove alabastrum deriva da una fortezza detta "Alabastra", costruita a Tebe in Egitto e dove vi erano numerose cave usate per l'edificazione dei templi. Questa tipologia di marmo in natura si contraddistingue per la sua intensa lucentezza innestata in un fondo chiaro, con bande di vario spessore che vanno dall'avorio al color vaniglia.

The origins of the limestone onyx go way back in history: it is the 'marmor alabastrum' of the Latins where alabastrum derives from a fortress known as "Alabastra" built in Thebes in Egypt and where there were a number of quarries used to build the temples. This kind of marble in nature makes its mark thanks to its intense shine inserted into a clear background, and stands out for its strips of varying thickness that range in colour from ivory to vanilla.

quartzite patagonia

È una delle pietre più particolari e scenografiche esistenti in natura. Estratta in Sudamerica, in particolare in Brasile, è di origine vulcanica e la sua struttura geologica è dovuta a milioni di anni di attività sismica. Il magma risalendo verso la superficie, raffreddandosi, si è cristallizzato incorporando al proprio interno le rocce e i minerali incontrati nel corso del suo cammino.

It is one of the most unusual and attractive stones that exists in nature. Quarried in South America, especially in Brazil, its origins are volcanic and its geological structure comes from millions of years of seismic activity. As the magma rose to the surface and cooled, it crystallised and incorporated all the rocks and minerals it encountered on its path.

grey roots

Un marmo di particolare fascino, originario dell'Anatolia, caratterizzato da un luminoso colore di fondo, il grigio argento, ed arricchito da zone miscelate tra loro che vanno dalle tonalità del bianco al grigio. Sulle superficie affiorano increspature e solchi dai toni caldi dell'oro e del crema che donano un effetto di piacevole contrasto con lo sfondo grigio, conferendo al Grey Roots un senso di antica regalità e valore.

A particularly appealing marble, originally from Anatolia, characterised by a bright silvery-grey background colour, and enriched by areas mixed together, ranging from white to grey shades. Ripples and cracks appear on the surface in warm shades of gold and cream that give it a pleasant contrasting effect against the grey background, giving the Grey Roots a sense of ancient regality and value.

gris breche dumas

E' il nome conferito a questa breccia, originaria dei Pirenei, in omaggio al noto drammaturgo francese Alexander Dumas. Un marmo sempre più difficile da reperire poiché la cava di estrazione è sostanzialmente esaurita. Per Imola l'intento è stato quello di riproporre sulla lastra ceramica l'estetica francese di questa roccia che si contraddistingue da un morbido e luminoso grigio chiaro di fondo e da sottili venature e sfumature tono su tono.

This is the name given to this pebble, originally from the Pyrenees, as a tribute to the famous French playwright, Alexander Dumas. An increasingly difficult marble to find because the quarries are basically empty. Imola's aim was to reproduce the French look of this rock on this ceramic slab that makes its mark with its soft, shiny light grey background and fine veining and tone-on-tone shades.

onyx aqua blue gold

Il marmo onice è formato da sedimenti calcarei colorati di acqua sorgiva e d'infiltrazione. Di provenienza asiatica, è un minerale che si caratterizza per il suo effetto di splendente trasparenza in superficie: una proprietà che lo rende molto raro e particolarmente adatto per gli elementi d'interni dall'elevato tocco di esclusività. Colori frequenti sono il giallo, il marrone, il rosso e il verde, declinati in sfumature inimmaginabili.

The onyx marble is made up of sedimentary limestone coloured by spring water and infiltration. Of Asiatic origin, it is a mineral that stands out for its shiny transparency effect on the surface: a feature that makes it extremely rare and particularly suited to interior design objects with a strong hint of exclusivity. Recurring colours include yellow, brown, red and green, that appear in unimaginable shades.
